[Kokkogam Tamil Book Pdf](#)

```
1 void main()
2 {
3     //...
4 }
5
6 // What is structure? Declares a structure in C++ with name, cell number and total marks as components.
7 // A structure is a collection of variables referenced under one name. A structure is declared using the keyword struct as
8 // following syntax:
9 struct structure_tag
10 {
11     type1 variable1; // type1 can be int, float, char, etc.
12     // ...
13     typeN variableN; // typeN can be int, float, char, etc.
14 }
15
16 Example:
17 struct Student
18 {
19     char Name[50];
20     int RollNo;
21     float Total_Marks;
22 }
23
24 // What are nested structures? Give an example.
25 // A structure within a structure is called nested structure.
26 Example:
27 struct date // structure tag
28 {
29     int Day;
30     int Month;
31     int Year;
32 }
33
34 struct emp // structure tag
35 {
36     int empno; // An identifier which identifies
37     char Name[50]; // member structure in program
38     float Salary;
39 }
40
41 // What are unions? Give an example.
42 // The structure union has been defined having several elements including a structure member after the
43 // union is built a structure of type emp. While defining both structures are defined before union structure.
44 // Write a program that asks the user to enter two integers, obtains the two numbers from the user, and outputs the
45 // larger number followed by the words " is larger by " with their smaller number" to the screen exactly. E.g., if the
46 // larger number is 7 and smaller is 6, message should be "7 is larger by 1 with their smaller number".
47 // If the numbers are equal print the message "These numbers are equal".
48
49 #include <iostream>
50 using namespace std;
51 void main()
52 {
53     int a,b;
54     cout << "Enter a, b\n";
55 }
```
